

RAJ PATEL

CYBERSECURITY ANALYST | PENTESTER | PHP DEVELOPER

Bardoli, Surat, India | praj01371@gmail.com | <https://www.linkedin.com/in/rajp13/>

Detail-oriented Cybersecurity Analyst and Penetration Tester with 3+ years of combined experience in PHP-based web development and security assessment. Skilled in designing secure admin panels, conducting VAPT (Vulnerability Assessment and Penetration Testing), and implementing secure coding practices. Adept at bridging the gap between development and security teams to ensure robust and compliant systems.

AREA OF EXPERTISE

- Web Application Penetration Testing (OWASP Top 10)
- Secure Coding (PHP Core)
- Burp Suite
- Source Code Review & Patching
- Admin Panel Development (Custom PHP Systems)
- VAPT Reporting & Remediation

EXPERIENCE

Cybersecurity Analyst & PHP Developer

Jemistry Info Solutions LLP, India | 2023 – Present

- Conducted vulnerability assessments and penetration tests across internal and client web applications, identifying critical flaws.
- Designed and developed secure PHP-based admin panels used by multiple enterprise clients for managing customer data.
- Implemented secure coding standards, patching vulnerabilities in live applications.
- Produced detailed VAPT reports and guided developers on code-level remediations.

Cyber Investigator (Consultant) 2023 – 2024

- Worked as a cyber investigation consultant on a national-level case titled “A Nationwide Scam: Creation of Illegal/Fake Identity Documents.”
- Contributed to the detection, analysis, and prevention of large-scale identity fraud across multiple digital platforms.
- Collaborated with technical and legal teams to trace digital evidence, uncover attack vectors, and strengthen preventive measures against document forgery and identity theft.

PHP Developer

Jemistry Info Solutions LLP, India | 2023 - Present

- Built and maintained dynamic PHP applications and backend admin systems for B2B clients.
- Optimized backend processes for performance and security, ensuring data integrity and reliability.
- Integrated REST APIs and handled authentication modules securely using custom token systems.
- Worked closely with the cybersecurity team to ensure compliance with OWASP standards.

PROJECTS

VAPT for E-commerce Platform (Internal Client)

Performed end-to-end penetration testing of an e-commerce application, discovered multiple high-severity flaws including business logic bypass and SQL injection. Delivered remediation strategy and implemented PHP-based security patches.

Admin Panel Development for Logistics Firm

Developed a secure admin dashboard for logistics management using Core PHP and MySQL with role-based authentication, CSRF protection, and input validation.
